

KRISMAR 2-HORSE

Winter

CHECKLIST

KRISMAR
HORSETRUCKS

2022 - 2023

- **Windows** | Are your windows frozen? Use your ice scraper or defroster. Avoid hot water at all times, as this can crack your window. Please, do not leave your engine running while scratching.
- **Windshield wipers** | Is your wiper fluid already provided with antifreeze wiper fluid? Do not wait any longer and spray a few times immediately to ensure that the pipe is completely filled with this liquid. In case of frost, make sure that the windscreen wipers are not frozen. If your 2-horse is parked outside, you can place a cork under the wiper arm so the wiper and window do not make contact.
- **Doors** | Always make sure that you have defrosting available against frozen locks and doors. You can buy these at the gas stations along the highway. Coat rubbers and doors with talcum powder or silicone spray to prevent freezing.
- **Fuel tank** | Winterize diesel engines. The so-called winter diesel prevents the diesel in the tank from flaking due to the cold. Always keep your diesel tank as full as possible to prevent condensation in your tank.
- **Water reel** | Is your Krismar 2-horse equipped with a water reel? Then disconnect the reel from the tap and open it to release any pressure from the line. Leave the tap open.

TIPS

-Try to keep your lights free of snow and dirt.

-Try to avoid short trips. A battery discharges faster in cold weather and can not recharge sufficiently during short journeys.

-Bring snow chains. Please consult the legislation per country. An obligation/ban in some countries.

-Make sure you always have road salt on hand so you can load and unload your horses safely.

-Be careful on the road and do not forget to enjoy the winter magic.
